

Rough Concept

Instructor-led training — virtual classroom or in-person

A rough concept (Grobkonzept) aligns everyone before detailed design begins. Fill what you know, mark open points, and route SME questions through the comment column. Detail (scripts, exact assessment, full evaluation plan) belongs in the fine concept.

1 Project frame

Project / training title	
Client / department	
Author	
Date	
Version	
Status	<i>Draft / In review / Approved</i>

Delivery format

☐ In-person ☐ Virtual classroom ☐ Blended

Participants

Min – max, and any grouping (e.g. 8–16, breakouts of 4)

Is there a corporate identity / brand to follow?

☐ Yes ☐ No

If yes: where are the guidelines, and who signs off on look & feel?

2 Starting point & need

Why does this training exist? Anchor everything in the problem, not the topic.

Trigger / business need

What happened or is at stake that made this necessary?

Performance gap

What are people not doing (or doing wrong) today?

Desired change

What should be observably different after the training?

3 Target audience

Who

Roles, function, number of people affected

Prior knowledge / entry level

What can you assume they already know or do?

Attitude, motivation, constraints

e.g. mandatory topic, low tech-confidence, language, shift patterns

4 Learning objectives

The core of the concept. Write each objective as an observable behaviour — a verb someone could watch or measure. Add the condition it happens under and the criterion for 'good enough'. Tag the cognitive level (Remember · Understand · Apply · Analyse · Evaluate · Create). If two designers could disagree about whether it was met, it is still a topic, not an objective.

No.	Learning objective (observable behaviour + object)	Condition (context / tools / support)	Criterion (standard / how success is judged)	Level
e.g.	...will be able to identify the three red flags of an invoice-fraud email	given a realistic inbox, without a checklist	catching all three in under 60 seconds	Apply
	By the end, participants will be able to...			
	By the end, participants will be able to...			
	By the end, participants will be able to...			
	By the end, participants will be able to...			

5 Framework conditions

The constraints the design has to live inside. Clarify these early — they shape every later decision.

Total time available	e.g. one 4-hour session; or 3 × 90 min
Deadline / go-live	
Budget / effort frame	
Platform / room	VC tool (Zoom/Teams...) and features, or room + seating
Tools available	e.g. Miro, Mentimeter, flipchart, LMS
Mandatory or voluntary	
Existing material to reuse	
Dependencies / constraints	e.g. works council, brand review, SME availability

6 Course flow

The agenda, phase by phase. Modality lives here: write 'group work in breakout rooms' for VC, 'group work' for in-person. The Phase / LO ref column ties each block back to a learning objective from Section 4 — every block should serve one. Pacing and energy emerge from this sequence.

Time / min	Phase / LO ref	Content / key message	Method	Material / activity	SME comment
15	Warm-up	Surface a real fraud case the group has seen	Group work in breakout rooms	Case card, Miro board	

7 Transfer & sustainability

How the learning survives contact with the workplace. Often skipped — and often what decides whether the training works.

Before (pre-work)

After (follow-up, practice, reminders)

Manager / team involvement

8 Success measurement (outline)

Only the rough idea here — the detailed evaluation plan belongs in the fine concept.

How will we know it worked?

Tie back to the learning objectives, not just a satisfaction survey.

9 Risks & fallback

Key risks

e.g. tech failure in VC, group too small/large, no SME sign-off in time

Plan B

Fallback activity or approach if a risk hits

10 Open questions & SME sign-off

Collect unresolved points here. SMEs can also comment inline throughout via the Word comment function.

Open question 1

Open question 2

Open question 3

SME name / date / sign-off: _____
