

Completion Isn't Competency. Judgment Is.

Most AI-literacy programs teach what the tool does. The real skill gap shows up later — in the moment someone has to decide whether to trust its answer. This curriculum is built backward from that moment, not forward from a feature list.

TOPIC AI judgment & responsible use	AUDIENCE Cross-functional staff, no AI background assumed
GOAL A defensible call under real pressure — not a certificate	FORMAT 5 modules · async + 1 live workshop · 4 weeks

Where Most AI Training Stops — And Where This One Starts

TYPICAL APPROACH	THIS PROGRAM
Explains what the tool does	Trains when to trust what it says
Same content for every role	Depth scaled to actual risk exposure
Success = finished the course	Success = correct call under deadline pressure

Five Modules, Each Built Around a Decision — Not a Topic

01	What AI Actually Does Separating real capability from hype and fear.	UNDERSTAND
02	AI in the Real Workflow Using it inside actual tasks — not a demo sandbox.	APPLY
03	Knowing When to Push Back Catching a wrong output before it reaches a client.	EVALUATE
04	Explaining It Without Jargon Turning a feature into an answer people trust.	CREATE
05	Staying Sharp Treating AI literacy as a habit, not a one-time badge.	ANALYZE

PROOF OF COMPETENCY — NOT PROOF OF ATTENDANCE

A completion badge proves someone clicked through five modules. It doesn't prove they'd catch a wrong AI output on a Friday afternoon with a client waiting. You can't verify that by watching people's real work — in Germany, monitoring employee behaviour that way needs works-council sign-off, so it's a compliance issue, not just an impractical idea. The proof has to live inside the learning environment instead: **embedded decision checkpoints** within each module, scored automatically, plus **a scenario-based final assessment** — not multiple-choice, but a realistic case where the "correct" answer depends on judgment, not recall.

THE LOGISTICS

Delivery That Fits Real Calendars

DELIVERY

- Microlearning (5-10 min) for the core concepts
- One live workshop — real scenarios, not lecture
- Job aids for the moment of use, not just training day

ROLLOUT

- 01 Week 1-2** — stakeholder input, module build
- 02 Week 3** — pilot with one group, feedback loop
- 03 Week 4** — full rollout, manager toolkit live
- 04 Ongoing** — quarterly refresh as tools change
